qualification, job classification, grading and salary scale system of the Company shall be developed and structured in accordance with the recent and future business visions of the Share Company.

In the study process, the consultant faced that competitors were not volunteer to share their experiences of salary scales. In addition to these facts the Consulting Firm has assigned highly experienced professional in the sector, the study tried to get up-to-date information from friends and fellows in the Construction business industry. Based on these information and facts the consultant tried to set the Company's salary scale that enables it to stay in the market at least for three years.

1.2 Objectives of the Consultancy Service

The objective of the consultancy service of this study is to assess the current status of the Company and conduct a comprehensive and reliable study of job classifications, job grading and salary scale manual based on the prevailing market situation and the information provided by ASER Construction Private Limited Company.

1.3 Scope of the Work

The current pay structure of the share company, i.e. positions salary, has been reviewed against the market price on same position. The existing jobs of ASER Construction Private Limited Company has been systematically classified and graded. Three Optional scale Proposals have been forwarded.

UNIT TWO: - JOB CLASSIFICATIONS

Normally as a basic norm or standard the job classification process has got two stages namely, job analysis and job evaluation. Before classifications processing of this study will give highlight on job evaluation, i.e. systematic ways of job analysis, classification and grading: -

2.1 The Job Evaluation

2.1.1 Purpose of Job Evaluation

Job Evaluation is a systematic way of defining the relative worth of jobs within an organization. The purposes of job evaluation include: -

- ▮ To help in bringing order to the relationships among jobs in the organization.
- ▮ To provide a rational basis for developing hierarchy of job values to enable the design and maintenance of an equitable and defensible pay structure.
- ▮ To achieve consensus among managers and employees regarding jobs and pay within the organization.
- ▮ To enable management to make consistent decisions on grading and pay level.

Job Evaluation is mainly concerned with establishing comparable worth of jobs within an organization and, as far as possible, ensuring employees doing work of equal value are graded and compensated the same within the pay structure.

2.1.2 Job Evaluation Methodologies

There are a number of methods to undertake evaluation of jobs in an organization. The most widely used job evaluation methods of techniques include the following: -

APPROVED BY:	 	Page 5 of 71
	Name:	Signature:

አሰር ኮንስትራክሽን ኃ.የተ.የግ.ማ ASER CONSTRUCTION P.L.C	MANUAL	Document No OM/HRAD/003
		Issue. No 1

Job Ranking:- This method is considered to be the simplest method of job evaluation. It involves the process of comparing jobs with one another and arranging them in order of their importance, their difficulty, or their value to the organization. Upon completion of ranking the ranked jobs are divided into a hierarchy of grades.

Paired Comparison:- This is a statistical technique used to provide a more systematic method of job ranking. The process involves comparing each job separately with every other job and giving a relative score. Then the scores are added for each job and a rank order is established. This method is considered suitable for small organizations having few jobs to be evaluated.

Job Classification:- Job classification, or grade classification, is a process of establishing and defining the characteristics of job grades into which jobs are to be placed. The grade definitions could be in terms of such factors as key tasks carried out, skill, competence, experience, initiative and responsibility that the jobs in the grade demand.

Point Rating:- This method is alternatively called point factor rating. It is a method which involves selecting and defining job factors, assigning numerical values to each specific job factor, and summing up the values of the factors for each job. The sum of these values provides a quantitative assessment of the relative worth of a job. It is a complex method; which requires carefully thought out definition of factors and assignment of values to job factors to be rated.

		OM/HRAD/003
	Jobs Classification, Grading and Salary Scale Manual	Issue. No
		1

Factor Comparison: - This method, as the name implies, compares jobs on several factors to obtain a numerical value for each job and to arrive at a job structure. The compensable factors used are usually

(1) Mental requirements, (2) Physical requirements, (3) Skill requirements,

(4) Responsibility, and

(5) Working conditions.

The advantages and disadvantages of the above job evaluation methods are compared in Table below:

APPROVED BY:	 	Page 7 of 71

Advantages and Disadvantages of the Different Job Evaluation Methods

Job Evaluation	Brief Description	Advantage	Disadvantages
Job Ranking	Jobs in an organization are compared with one another and placed in order of rank-- from highest to lowest. It is the simplest of the job evaluation methods.	▮ The process is simple ▮ Can be done quickly ▮ Cheap to implement ▮ Easy to explain	▮ No standards defined ▮ Grades established arbitrarily ▮ Difficult in assigning grades to new jobs ▮ Difficult to apply for large organizations ▮ Adjacent ranks suggest that there are equal differences between jobs, which are very unlikely. ▮ Requires the evaluators to know all the jobs, which is virtually impossible in an
Paired Comparison	Whole jobs are ranked by the statistical method of paired comparison	▮ It is easy to implement ▮ Greater consistency in ranking	▮ No defined standards ▮ Suitable for evaluating only a limited number of jobs
Job Classification	Job classification, as its name implies, is based on defining different classes or grades of jobs. The grades are defined based on different criteria such as educational level, experience, training, special skill, physical fitness, ability and amount of responsibility. The lowest grade may be defined as requiring the least in terms of the criteria mentioned above and, contrarily, the highest grade requiring the most. Intermediate grades may then be defined in a similar manner in between these extremes. Once the grades are defined, the jobs are slotted into the grades by comparing the	▮ Standards for making grading decisions are provided ▮ Quick and easy to use ▮ Easily understood by employees ▮ It is relatively flexible ▮ It is not difficult to implement and maintain ▮ New jobs can be placed in a grade structure without difficulty ▮ Relatively easy to secure agreement about the classification of most jobs. ▮ Problems of compensation administration become easier to solve.	▮ Considered subjective compared to point rating method ▮ Difficult to write grade level descriptions

APPROVED BY:	 Name:  Signature:	Page 8 of 71
---------------------	--	--------------

አሰር ኮንስትራክሽን ኃ.የተ.የግ.ማ ASER CONSTRUCTION P.L.C	MANUAL	Document No OM/HRAD/003
Logo 		Issue. No 1

Point Rating	Point-rating method assesses jobs in terms of the degree to which several specifically defined factors are present in the job being evaluated. A factor-by-factor assessment is carried out, each factor divided into degrees with as low-to-high scale of point values. Jobs are assigned a degree and a corresponding point value for each factor, and their overall value is determined by totaling	- Perceived to be relatively objective - Defined standards provide as a guide to judgment	- Complex; not easily understood by employees - Not flexible - Perceived value of jobs may not match with point rating result; leads to a trial and error process - Design and implementation is time taking - New jobs are not easily placed in a grade structure
Factor Comparison	Factor comparison involves judging which jobs contain more of certain compensable factors. Jobs are compared with each other (as in the ranking method), but on one factor at a time. The judgments permit service delivering of a comparison scale of key jobs against which other jobs may be compared. The compensable factors used are universal factors found in all jobs. This means that one job-comparison scale for all jobs in the organization may be constructed, and this practice is often followed upon installation of factor comparison. However, separate job-comparison	- Conducive for a custom-built installation in each organization resulting in a better fit with the organization. - Relative job values resulting from analysis enables comparison of jobs with each other.	- Since key jobs form the basis of the job-comparison scale, job changes necessitate rebuilding the scale accordingly. - It is complex to design - It's complicated step and difficult to explain - Very limited application

Notice: - Job Classification and Point Rating have wider applications than the others. The Job Classification method is the most widely used of all the job evaluation methods. Point Rating has the second wider applications next to Job Classification than the others. As mentioned above in the table Job classification is with the highest advantages and the list disadvantages from other evaluation methods; and the consultant opted this method mainly considering the existence of the client in the service delivering of construction industry and high growth prosecute expectation.

2.1.3 The Job Evaluation Method Used

The Job Classification (Grade Classification) method has been used to undertake the job evaluation of the Company due to the following reasons:

APPROVED BY:	  Name: Signature:	Page 9 of 71
---------------------	---	--------------

አሰር ኮንስትራክሽን ኃ.የተ.የግ.ማ ASER CONSTRUCTION P.L.C	MANUAL	Document No OM/HRAD/003
Logo 		Issue. No 1

- || Past experience shows that this method results in acceptable salary grades.
- || It is easy for all stakeholders (management and employees) to understand the evaluation method easily; whereas the Point Rating system (which is the next better alternative) uses a complex system in assigning point values to different factors.
- || The system is relatively flexible and adjustments in job specifications can be easily accommodated.
- || It is not difficult to implement and maintain.
- || New jobs can be placed in the grade structure without difficulty.

The Grade Classification System adopted for ASER Construction Private Limited Company consists of establishing a number of categories of jobs along a pre-determined scale. Each category, known as job grade or class, has been defined and illustrated, wherever possible. On the basis of the duties, qualifications, responsibilities and working conditions of each job has been studied and assigned to the defined level or grade.

The grading process involves:

- || Determination of the number of grades.
- || Preparation of grade descriptions broad enough to include several jobs and,
- || Determining the classes to which the jobs should belong based on the job specifications.

The classification system takes as points of reference not only existing jobs but also those that are to be created following the recommendation and implementation of the present study.

It is proposed that there shall be a classification system of fourteen grades for ASER Construction Private Limited Company.

		OM/HRAD/003
Logo 	Title: Jobs Classification, Grading and Salary Scale Manual	Issue. No
		1

Manual, clerical and trade /craft jobs (MC, HT & CF) are generally placed at the lowest level of the classification system. The common characteristics of this cluster of jobs are that they provide support services to those in the professional grouping.

Positions of professional/technical personnel engaged in design, sales, accounting, human resource development, marketing, import & export and related expertise are found in the middle grades of the scale. This group mainly comprises semi or Para-Professional (PP) and technical jobs.

Managerial, professional and administrative jobs, i.e. (P, AM), occupy the upper half of the grading system with executive jobs being set at the highest level. Jobs of high, middle-and lower-level management and supervisory functions fall in this group. A characteristic that cuts across the jobs in this group is that they involve making decisions and have supervisory responsibilities over the work of others.

The grade definitions given for each grade comprising job content, educational and experience qualifications are determined to facilitate recruitment of deserving professionals and to maintain the professional standard of the Share Company.

The grade classification prepared for ASER Construction Private Limited Company is presented in this manual. The grade classification table shows the grade, the salary range of the grade, list of jobs in each grade and summary of job requirements.

2.2 Classification Concepts

Job analysis entails classification and documentation of the role by a systematic analysis and evaluation of the knowledge and skills, task complexity, judgment, independence, problem solving and decision making accountability. The accuracy of the classification process hinges up on the accuracy of the position description.

APPROVED BY:	 Name:  Signature:	Page 11 of 71
---------------------	--	---------------

አሰር ኮንስትራክሽን ኃ.የተ.የግ.ማ ASER CONSTRUCTION P.L.C	MANUAL	Document No OM/HRAD/003
Logo 		Issue. No 1

The proper classification of Jobs can help to determine the value of a certain work, its worth in comparison to the relative work of other positions within an organization.

Generally, there are key factors or parameters that are used to analyze and classify jobs. The key parameters are consistently applying to all different types of work including specialists/professionals/ and generalists lower level and

senior level Jobs, and not biased in favor of one group or the other such parameters of key elements could for instance include but not limited to:-

- ‖ Thinking demands (Analytical & Problem Solving) of the Job
- ‖ Judgment and decision making requirements of the Job.
- ‖ Essential Skills and knowledge needed for the position.
- ‖ Working contacts or span of influence.
- ‖ Extent of responsibility in terms of finance, logistics etc. and
- ‖ The physical effort needed to manage the job.

However, it will be worth to note that such parameters should emanate from and be relevant to the accomplishment of mission, objective and programs of the organization under consideration.

2.2.1 Methodology and Process

- ‖ An exploration is made by referring to documents and materials that define concepts related to the study of job grading & classification & salary scale development.
- ‖ Information of has been observed from the market with similar positions and qualifications in various sectors, especially in the construction operations execution industry.

APPROVED BY:	 Name:  Signature:	Page 12 of 71
---------------------	--	---------------

አሰር ኮንስትራክሽን ኃ.የተ.የግ.ማ ASER CONSTRUCTION P.L.C	MANUAL	Document No OM/HRAD/003
Logo 		Issue. No 1

Based on the information observed/collected and ASER Construction Private Limited Company's existing salary the new salary scale of the Company is proposed.

Job classification is made on conventional classification parameters such as, training /qualifications required, task level, judgment and decision making requirements of the job, supervisory level etc.

2.2.2. Over View of the Existing Jobs and Actual Salary

Jobs are not properly classified and graded; the salary pays structure are too wide horizontally, i.e. steps are 20. Thus, horizontal salary steps are not designed with proper steps, i.e. ceiling of scale is too high. The current salary scale has no capacity of incorporating the top pay system of the Construction Company. It lacks flexibility nature of a scale. Qualification requirement for the job titles within the job classification was not set at all.

2.2.3 ASER Construction Private Limited Company's Job Classification

It is to be recalled that ASER Construction Private Limited Company is emerged as a visionary organization engaged in Ethiopian to deliver services in construction activities mainly for road and building construction and maintenance, water works, airfield construction projects etc.

This industry, the civil construction industry for which ASER Construction Private Limited Company is currently working in, requires huge capital, high level technological security equipment, professionals, and skilled and unskilled man power of different trades. Since ASER Construction Private Limited Company is currently working on this sector, this study tried to deal with both the functional management and core operational working activities, i.e. job classification of the construction operations and support giving positions have been included in the study.

APPROVED BY:	  Name: Signature:	Page 13 of 71
---------------------	---	---------------

አሰር ኮንስትራክሽን ኃ.የተ.የግ.ማ ASER CONSTRUCTION P.L.C	MANUAL	Document No
		OM/HRAD/003
Logo 	Title: Jobs Classification, Grading and Salary Scale Manual	Issue. No
		1

Therefore, the classification of the jobs in the Company requires the consideration of both core operational management and functional management elements. Accordingly, the jobs have been classified into the following main class series. The classified jobs of ASER Construction Private Limited Company have been made into 6 categories.

2.2.3.1 Manual and Custodial Services (MC)

For the jobs in this series the working condition, physical requirements to manage the job and level of supervision the job demands has been taken in to consideration.

2.2.3.2 Handcrafts and Technical Services (HT)

For the jobs in this series, the compression capacity of the vehicle/equipment run by the job holder, types of maintained, delivered services, modified materials, tools and equipment, types of spare parts & materials used for repairing, types of training that leads to acquisition of certificate (e.g. driving license) level of supervision required has been considered.

2.2.3.3 Clerical and Fiscal Services (CF)

The persistence of routines, types of instrument used, complexity of work, independence and initiative required, and level of supervision has been taken into consideration as a base to develop the class series.

2.2.3.4 Professional & Para Professional Services (PP)

Independence and initiative required, complexity and difficulty of the job, types of research, level of supervision, professional qualification /skills required to perform the job has been considered as a base to develop the class series.

APPROVED BY:	 Name:  Signature:	Page 14 of 71
---------------------	---	---------------

አሰር ኮንስትራክሽን ኃ.የተ.የግ.ማ ASER CONSTRUCTION P.L.C	MANUAL	Document No OM/HRAD/003
Logo 		Issue. No 1

2.2.3.5 Administrative and Managerial Services (AM)

Scope of responsibility, level of supervision initiative and independence has been considered.

2.2.4 Setting Qualification Requirements for the 6 Categories

An individual job holder is supposed to have the ability/capacity, skill and knowledge of certain standard in order to perform a given job. Accordingly, considering the different jobs character, qualification requirements have been set out.

2.2.4.1 Custodial and Manual

The minimum education level requirement will be completion of 10th grade and ability to read and write the working language of the Construction Company. This occupational series demand this minimum requirement and additional education and experience to perform the higher level work of the same job in the series.

The occupations in this group (unskilled) are Protection Officer, Sanitarian Service Attendant, Office Attendant, Load Unload, Labor etc.

2.2.4.2 Handicrafts and Technical Services

Requires certificate of training for some jobs and the others may require completion of 11th grade up to Vocational/Technical school, i.e. 10+1 up to 10+4. Diploma in the field of specialization and additional experience is required as the complexity of the job and precision expected is increased.

APPROVED BY:	 	Page 15 of 71
	Name:	Signature:

አሰር ኮንስትራክሽን ኃ.የተ.የግ.ማ ASER CONSTRUCTION P.L.C	MANUAL	Document No OM/HRAD/003
Logo 		Issue. No 1

Handicrafts: - The occupations under this group are Driver, Assistant Vehicle Operators, multi-purpose technicians, etc.; switch board operators, etc.

Technical; - Occupation of this class require the completion of technical /vocational school up to college education in the line of relevant activities but the lower class series of these occupations could be filled by lesser educated employees as long as this capacity could be found out by practical testing. Those occupations under this group are building technicians, electro mechanics, electrician, Auto Mechanics, plumbers, painters, carpenter etc.

2.2.4.3 Clerical & Fiscal

Occupation of this class is clerical and routine administrative work in its nature. It requires completion of 10+1 or 10+2 or 10+3 up to college diploma level.

The occupations under this group are, clerk of different Jobs, such as, administrative clerk, secretary etc...

2.2.4.4 Para Professionals

The occupants of this category assist professionals. This position cannot be occupied other than those who have the required college diploma. Para professional occupations require the completion of college diploma or similar education levels. However, in special circumstances Para-professionals like Electro Mechanical/Civil Engineering and Technicians of the lower grade of the class series could be filled by technical school diploma or college diploma with additional experiences or with out..

APPROVED BY:	 Name: _____	Page 16 of 71

Signature: 

አሰር ኮንስትራክሽን ኃ.የተ.የግ.ማ ASER CONSTRUCTION P.L.C	MANUAL	Document No OM/HRAD/003
Logo 		Issue. No 1

The occupations, in most cases, under this group are, electro mechanical assistants, building technicians, advocates, stock control, technicians etc.

2.2.4.5 Professionals

Professional occupations as a rule require the acquisition of a bachelor degree. Training and experience cannot be substituted for educational requirements. However, due to the scarcity of some of these professionals in the labor market it becomes impractical to strictly adhere to this situation.

Thus, for such special position up to certain reasonable level college diploma or vocational school diploma with additional experience can be substituted for bachelor Degree.

2.2.4.6 Administrative and Managerial

This category consists of managers at intermediate and higher level in the organization. Setting qualification requirements for these positions will be governed by the qualification of the professional staff that they supervise which will be in managerial positions of a lower grade than they occupy now.

Therefore, taking in to consideration the Construction Company's prevailing situation the minimum education level for these position is a Bachelor degree in the relevant field. However, under special circumstances with great care, upon authorization of the Construction Company's top management college Diploma with sufficient experience, meaning two years additional experience for each additional educational year can be substituted for a bachelor degree.

UNIT THREE: - SALARIES AND BENEFITS

3.1 Salaries

Salaries and benefits are provided in exchange for the employee's contribution to the Share Company. An effective salary and benefit program implementation can help shape and encourage the performance and improve job satisfaction as well.

ASER Construction Private Limited Company, therefore, shall offer a fair exchange for the knowledge, skills, experiences and abilities of its employees providing to the Construction Company. ASER Construction Company's fair and equitable offering of compensations improves its competitiveness and makes employees feel valued.

Employees can be compensated generally in two ways direct and indirect compensation. Direct compensation refers to the salary paid on a monthly basis while indirect compensation refers to the additional benefits portion.

When one discusses on salary and benefits it is usually thinking of equity. Equity has two dimensions, internal and external. Internal equity is the establishment of salary levels that reflect the worth of the job to the Construction Company. Employees, basically ask whether they are being paid fairly in exchange for what they are giving to the Company as compared to the pay of their fellow employees.

Since work has a social character and as such may not be performed by one or few individuals alone, ASER Construction Private Limited Company has perceived the importance of addressing and ensuring internal equity before employees lose their motivation.

The other related variable in pay structure is external equity. We have to consider that no organization operates in a vacuum, i.e. the external environment must be taken into account, especially when examining salaries.

APPROVED BY:	 	Page 37 of 71
	Name:	Signature:

አሰር ኮንስትራክሽን ፓ.የተ.የግ.ማ ASER CONSTRUCTION P.L.C	MANUAL	Document No OM/HRAD/003
Logo 		Issue. No 1

Each organization must decide if its policy will lead, meet/cope, or lag its competitors.

ASER Construction Private Limited Company has committed to implement a new job classification, qualifications, grading and salary scale of the Company to improve its efficiency for its recent and future developments.

Cognizant or consciousness of this, ASER Construction Private Limited Company has commissioned this consultancy to propose a systematic job classification, grading and salary scale of the Company in the light of its recent and future business developments.

In view of this the consultant has reviewed the pay structure of competitors (other likeminded companies) for comparative purpose.

The consultant team has conducted an observation survey of private and government service delivering companies in a way that it helped the consultant to give reliable alternatives.

3.2 Employee Benefits

Employee Benefits, sometimes called fringe benefits, include those payments and services that workers receive in addition to their regular salaries. Such benefits may be provided in whole or in part by the employers.

In recent days certain kinds of employee benefits such as annual leave, severance and compensation, insurance etc. are provided by the employers, because they are legally required to do so. In addition to legislation requirements organizations provide benefits to employees to meet the following objectives.

- 1) To attract and retain qualified workers: - organizations look upon the cost of employee benefits as an investment in recruiting and maintaining a stable work force.

APPROVED BY:	 Name:  Signature:	Page 38 of 71
---------------------	--	---------------

አሰር ኮንስትራክሽን ኃ.የተ.የግ.ማ ASER CONSTRUCTION P.L.C	MANUAL	Document No OM/HRAD/003
Logo 		Issue. No 1

- 2) To motivate workers to become more productive: - The offering of benefit package that truly meets the needs of employees helps to create conducive environment that encourages staff to strive to improve their job performance.
- 3) **To meet employee's needs for job security and job** satisfaction: - Cognizant of these objectives ASER Construction Private Limited Company may consider a two- part benefit program: -
- | Basic or Core Benefits: - These include benefits of life and accident insurance, annual leave, medical benefits and others that are legally required to do so. These basic or core benefits are supposed to provide a foundation for the safety and protection to all staff members, for which ASER Construction Private Limited Company is supposed to cover all or in part of such costs.
 - | Flexible Benefits: - These category of benefits largely give staff members the choice to supplement their basic benefits or add new ones. They are like provident fund, schooling allowances, medical coverage for dependents.

Besides managers, core professionals and technicians in many organizations especially in the service delivering companies are often provided prerequisites or perks, which are defined as privileges that are incidental to their regular salaries. Some of them are self-drive vehicles with fuel or fuel cost without vehicle, responsibility allowance, professional fee/allowance, and surplus Construction, mobile phones with full or partial covering of bills.

Therefore, ASER Construction Private Limited Company to achieve the aforementioned employee benefit objectives has to install and implement a sustainable fair employee benefit package system taking in to account its affordability and financial capacity.

		1

Accordingly, after thoroughly analyzing and comparing the other competitor's fringe benefit we recommend the following benefit package for ASER Construction Private Limited Company.

However, it is worth to note that further and systematic study should be conducted in the future to establish a well benefit package system that can provide a desired outcome.

Benefits Other than legally required (those employees entitled by labor law) Recommended for ASER Construction Private Limited Company are Shown in the Table Below

I/N	TYPE OF BENEFIT	COMPANY	EMPLOYEE
1	Medical Cost (Other Than Occupational Injuries)	80% of Birr 2000/year	20% of Birr 2000/year
2	Transport Service	- Assign Employee Service Bus for Pool service. - Assign vehicle to top manager with limited liter of fuel. The limit shall be decided by the Management of ASER.	
3	Responsibly Allowance	10% - 20% Basic salary or further study	
4	Professional fee/allowance for core professionals and Technician only, i.e. identified by the Construction Company's management body.	2 years of service 10% of basic salary 3-7 years' experience 15% of basic salary 8-10 years of service 20% of basic salary 11-15 years of service 25%	
5	Insurance		
5.1	Life Insurance	24 hours

		1

3.3 Proposed Salary Scale

The proposed salary scale of job positions in ASER Construction Private Limited Company has taken from the potential competitors in the service delivering Industry. Based on these facts different options, one, two & three have been prepared for the Construction Company's management decision.

| Option One

In order to differentiate the Grade levels considering the grades qualification, specifications and definitions the study has developed 21% - 25% of differences to the first option of the salary scale. This study has presented the first Grade /class of jobs salary to be Birr 996, i.e. Jobs classified in Grade 1 (G1) beginning salaries started from Birr 996. Accordingly, the starting job salary for the highest grade G19 is Birr 55,183, based on the job evaluation.

| Option Two

Option Two is constructed with starting salary scale of a job Grade (G1), i.e. Birr 1,100. It has been developed considering the grades qualification, specifications and definitions the study has designed vertical differences of 21% - 25% on the second option of the salary scale. Hence, differences have been added or distributed to each grade level starting from G1- G19, whereas starting salary of G1 and G19 shall be Birr 1,100 and 60,945 respectively.

| Option Three

The third option has been developed by adding 21% - 25% differences on each grade levels based on grades qualification, specifications and definitions. Thus, difference will be added or vertically marked up over Birr 1,215 as a minimum job grade, G1 and Birr 67,316 for the highest grade, G19.

UNIT FOUR: - BRIEF GUIDELINE TO IMPLEMENT NEW SALARY SCALE STUDY OF THE COMPANY

After the approval of the proposed salary scale, it may be implemented on the basis of the following guide lines.

- 4.1 The salary of the employees earning below the base salary of their grade will be raised to the starting salary. Salaries above the base that fall between two incremental steps will be fixed on the next higher incremental step. Salaries that fall exactly on a certain incremental step will stay there until the next annual increment.
- 4.2 If the salary of an employee falls above the maximum salary of his grade, his salary will be treated as a special case. In this circumstance giving annual increments for such employees may be continued or stopped according to the HRM policy of the Construction Company. However, the best thing is to train such employees so that they can be promoted to a job in the higher grade. New entrants on such job will start on the base salary for that job.
- 4.3 The job grading has been made taking into consideration the position classification series. The grading shows the relative value of the job in monetary term which has been expressed in terms of salary scale and salary grade. However, the contemporary market value of some specific jobs in a certain class series may not easily coincide to the grade assigned to the class series the job is in.

For example, the job of Building Technicians and Electro Mechanics etc. can be cited as an example.

Under this circumstance the Company is forced to seek for another alternative. In this case the following measures can be taken after carefully analyzing the pros and cons.

	Jobs Classification, Grading and Salary Scale Manual	1

4.3.1 Under this condition considering prevailing market situation of the given job narrow the salary gap by topping up to the basic established.

4.3.2 Salary scale and make adjustment whenever the market situation allows doing so. For example, consider the salary of the Engineers or Electro Mechanics.

In the Construction Company's job classification system, these jobs are classified under the class series for which the salary scale starts from Grade 4 and ends up at Grade 9. If the Company faces a situation for which cannot find heavy machine operator with salary at grade 9 basic (starting) or in between or at maximum (the last step in the grade) with great care and consideration by the top management committee to identify such jobs and get approval by the General Manager. After approval of pay by the CEO, the additional or top up shall be executed to narrow the gap between the market and the salary scale of the Construction Company.

4.3.3 With great care and consideration by top management committee, identify such jobs and get approval by the General Manager. After getting approval pay the salary of the higher/highest grade that can reasonably respond to the prevailing market situation.

4.4 Future salary increments should be given on the basis of the incremental structure of the grade the job is in; so that the scale will not be disturbed.

4.5 Whenever new jobs (not included in the scale) are created, their job description will be prepared, evaluated and classified into their appropriate grade. The evaluation and classification will be carried out by a committee established for the same purpose.

	Title: Jobs Classification, Grading and Salary Scale Manual	

- 4.6 If the qualifications possessed by an employee are below that specified on the Construction Company's qualification requirements make the employee to continue to earn the salary fixed for the grade the job has been classified into. However, this action has to be supplemented by providing additional training to the employee to narrow the qualification gap he /she has had. Under the conditions where it is impossible to narrow the qualification gap within a reasonable time assign the employee where he/she is appropriate.
- 4.7 New recruits to all jobs will have to satisfy the requirements specified on this Manual and will start at the base or in the between or at the maximum for the job as the situation allows doing so.
- 4.8 From the three salary scale options mentioned above, the second option has been suggested and the company Management has already started implement this option three the consultant has attached the horizontally extended salary sale of the chosen option.
- 4.9 The Company, they shall continue to implement the chosen option with the guideline stated from 4.4-4.7 above
